

Information Security & Assurance

Paktronix Systems LLC provides comprehensive consultative and implementation support services focused on risk management and data integrity. Our team of experienced professionals develops and utilizes continuous improvement processes to deliver usable results for our clients. We assist our clients in meeting their risk management and data integrity needs with our three core service offerings:

- PakRMS - Paktronix comprehensive Risk Management Services
- PakIE - Paktronix Information Exchange
- PakMON - Paktronix PakSecured Risk Management Modular Platform

PakRMS - Comprehensive Risk Management Services: Paktronix provides risk management consulting, implementation, and integrated services covering all aspects of risk analysis, management, and mitigation support. Unlike providers who only cover network vulnerabilities and IT risk, Paktronix maintains full time legal staff versed in business, cyber, and IP law to help your company present an integrated and comprehensive risk management vision. We can assist you with all facets of risk management from third-party compliance audits to insurance and contractual risk mitigation implementations.

PakIE – Paktronix Information Exchange: We build on our global knowledge of risk management to provide you with a liaison service facilitating internal communication between your departments. Our ability to understand all sides of a question and effectively communicate the specific impact to each department in terms of their stake allows us to facilitate a comprehensive view of complex requirements. This saves you time and money by ensuring that you meet your business goal on the first run rather than spending massive effort patching together disparate point solutions.

PakMON – PakSecured based Risk Management System: In addition to our consultative services, Paktronix offers products such as PakMON, a PakSecured based client or cloud hosted risk management system providing network and system monitoring and analysis for risk, compliance, and governance support. PakMON allows you to leave the driving to us by delivering a user-friendly interface and intuitive reporting to assist you in managing the dynamic risk environment surrounding your critical infrastructure.

Paktronix Systems LLC holds some of the highest levels of certification within the information security community and partners with focused cyber security associations.

Primary Security Certifications:

- CISSP - Certified Information Systems Security Professional
- CISA/CISM - Certified Information Systems Auditor / Manager
- NSA IAM/IEM - NSA InfoSec Assurance Methodology / InfoSec Evaluation Methodology

Representative Partnerships and Associations:

- InfraGard - National Infrastructure Protection (Founding Member)
- FBI - Cyber Crimes Taskforce member access
- CERT - Computer Emergency Response Team
